Report Time:

INCIDENT SUMMARY

The State Operations Center is activated at a Level 1 to provide support and coordination for California wildfires.

WEATHER SUMMARY

SOURCE: NATIONAL WEATHER SERVICE

Northern California

Dry conditions with smoke locked in the valley affecting air quality and visibility will persist. Winds will become onshore pushing the smoke out of the Bay and through the Delta. The winds will not be strong enough to scour the smoke out of the central and northern Sacramento Valley. Daytime relative humidities 10-25%. Winds will remain 5 to 10 mph over the next few days.

Southern California

Winds will become onshore, from the southwest, at 5-12 mph during the day with local gusts to 20 mph along the coast. This will increase humidities and cool temperatures.

Northern California

Valley

Temp Highs: 62-72°, Lows: 35-45°
Humidity: 15-25% Day, 65-80% Night
Winds: Variable 4-8 mph winds.

Foothills/Mountains

Temp Highs: 55-65°, Lows: 15-45°
Humidity: 15-25% Day, 30-60% Night
Winds: Diurnally terrain driven 4 to 8 mph. Isolated northeast 6-12 mph with gusts to 20 mph after midnight.

Southern California

Coast

Temp Highs: 65-70°, Lows: 50-55°
Humidity: 35-50% Day, 85-100% Night
Winds: W/SW 5-10 mph, with local gusts to 15 mph.

Inland

Temp Highs: 70-75°, Lows: 40-50°
Mtns Highs: 50-60°, Lows: 30-40°
Humidity: 15-30% Day, 35-50% Night
Winds: Light and variable becoming west 5-10 mph by late morning.

Outlook for Saturday/Sunday: Fire Weather watch for Sierra Nevada Foothills late Saturday night through Sunday.

Winds will increase along the central and northern Sierra Nevada foothills, including the Camp Fire, late Saturday evening through Sunday. Winds combined with humidities in the 20s to lower 30s overnight and in the teens on Sunday will result in the potential for critical fire conditions. Winds are expected to decrease early evening Sunday. Southern California will stay dry and mild, as light onshore flow continues over the weekend.

The first chance of precipitation still looks to be sometime around or after Thanksgiving, with low confidence on exact timing. Precipitation with this first weather system looks light, with no high intensity short duration rain events to trigger debris flows. However, light rain will impact any tent or outdoor shelter locations.
